

Especially for outdoor applications -

the new BIOLogic Multi Oil OKS 8600 and 8601

Maisach, 25.10.2013 – The new BIOLogic Multi Oil OKS 8600 with EU Ecolabel is an innovative further development of the proven OKS 8600. The highly effective product for a broad range of applications distinguishes itself through its biodegradability and its basis of renewable raw materials. Thus making it particularly suitable for outdoor use where contact with soil or water cannot be excluded - such as the lubrication and maintenance of machine components and devices used outdoors.

Thanks to its further development the new OKS 8600 disposes not only of a notably higher flashing point but also of optimised friction and wear protection properties. It furthermore contains solely raw materials and additives specified in the "Lubricant Substance Classification List", so that it fulfils the requirements of the EU Ecolabel to the full extent.

"BIOLogic OKS 8600 EU Ecolabel fulfils all the criteria with regard to creep properties, corrosion protection, water displacement and lubrication capability outstandingly", says Markus Leirer, Technical Head of OKS Spezialschmierstoffe GmbH. "In addition, this highly effective multipurpose oil is based to more than 90 percent on renewable raw materials and thus fulfils the requirements placed on sustainable products. The award of the EU Ecolabel to the product is further proof of its genuine innovation."

About OKS

OKS Spezialschmierstoffe GmbH is a specialist in lubricants operating worldwide for 35 years. Through the trade branches for technical goods and mineral oils OKS reaches both the commercial users and the industrial customers. The training and instruction of our trade partners ensures excellent consulting services and competence in solving problems locally. Longevity and cost efficiency of the used lubricants are ensured thanks to a modern product spectrum and the constant expansion of our range of products.

OKS produces and sells about 150 standardised high-performance products for reducing friction, wear and corrosion. The main field of use of the OKS speciality lubricants and chemotechnical products is industrial maintenance, servicing and production.

The products developed by OKS engineers and technicians are produced under strict environmental and quality requirements at the company headquarters. In order to expand the production and development capacities these were relocated from Munich to Maisach in the middle of 2011. From here just-in-time dispatch of the OKS products is also carried out worldwide.

OKS Spezialschmierstoffe GmbH has been a member of the Freudenberg Chemical Specialities SE & Co. KG, a company of the Freudenberg Group since 2003.
