#### 8.2 Exposure controls

#### **Engineering measures**

It is recommended that all dust control equipment such as local exhaust ventilation and material transport systems involved in handling of this product contain explosion relief vents or an explosion suppression system or an oxygen deficient environment.

Personal protective equipment					
Eye protection :	Safety glasses with side-shields				
Break through time :	Nitrile rubber > 10 min Class 1				
Remarks :	For prolonged or repeated contact use protective gloves. The break through time depends amongst other things on the material, the thickness and the type of glove and therefore has to be measured for each case. The selected protective gloves have to satisfy the specifica- tions of Regulation (EU) 2016/425 and the standard EN 374 derived from it.				
Skin and body protection :	Choose body protection in relation to its type, to the concen- tration and amount of dangerous substances, and to the spe- cific work-place.				
Respiratory protection :	Not required; except in case of aerosol formation.				
Filter type :	Filter type P				
Protective measures :	The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

### **SECTION 13:** Disposal considerations

13.1 Waste treatment methods				
Product :	Waste codes should be assigned by the user based on the application for which the product was used.			
	The product should not be allowed to enter drains, water courses or the soil.			
Contaminated packaging :	Packaging that is not properly emptied must be disposed of as the unused product. Dispose of waste product or used containers according to local regulations.			
	The following Waste Codes are only suggestions:			
Waste Code :	used product, unused product 12 01 12*, spent waxes and fats			
	uncleaned packagings 15 01 10, packaging containing residues of or contaminated by hazardous substances
